

Drawing Engine Command Set

Section 6: DRAWING ENGINE COMMAND SET

Special Programming Note:

Shadowed Register:

1) $CMD(0x0048) = CMD(0x0168)$

6.1 Noop

Command Name: No operation

Command Mnemonic: NOOP

Command Description:

The NOOP command performs a null operation. The CHIP returns to its idle states.

Command Capabilities:

- None

6.2 BitBlt

Command Name: Bit Block Transfer

Command Mnemonic: BITBLT

Command Description:

The BITBLT command manipulates rectangular areas in the local buffers. The source or destination can be in the Display buffer. The BITBLT command requires the host to calculate the scanning direction and provide the correct corner of both the source and destination rectangles. The scanning direction will always be from left to right, top to bottom regardless of the DIR field for any bitblt with zoom or any packed mode bitblt.

Command capabilities:

- Transparent BLT.
- Raster operations as defined by the ROP field of the command register.
- Fast area fills with selectable pixel values.
- 32x32 and 8x8* area patterning.
- Color expansion.
- Screen door transparency in stipple mode.
- Bit plane masking.
- OpenGL Alpha Blending

* In 8bpp full color area patterning, 8x8 area pattern mode is treated as a 16x8 area pattern.

0x1 OPCODE

REGISTER	PARAMETER	FORMAT	DESCRIPTION
XY0	Source	X-Y	Corner of source
XY1 [†]	Destination	X-Y	Corner of destination
XY2	Width/Height	X-Y	Width/Height of Rect
XY3**	DIR	I	Direction right justified
XY4	YZOOM	NA-Y	Zoom Factor

** Regarding monochrome expansion bitBLTs, XY3 register specifies the number of pages.

DIRECTION	CODE	CORNER REQUIRED
L → R, T → B	0x0	Upper Left
L → R, B → T	0x1	Bottom Left
R → L, T → B	0x2	Upper Right
R → L, B → T	0x3	Bottom Right

6.2.1 XY4 Register Zoom Data Format

This register contains the Y zoom factors for the BITBLT command.

Bits	Name	Value	Function
XY4[15:0]	YZOOM	0x0 - 0x1	Y direction Zoom factor No Zoom
		0x2	2X Zoom
		0x3	3X Zoom
		0x4	4X Zoom
		0x5	5X Zoom
		0x6	6X Zoom
		0x7	7X Zoom
		0x8	8X Zoom
		0x9 - 0xFFFF	9X to 65535X Zoom

6.3 LINE

Command Name: Line

Command Mnemonic: LINE

Command Description:

The LINE command draws straight lines in to memory using a modified Bresenham's Algorithm to ensure that a line drawn from point A to point B will exactly match a line drawn from point B to point A. This command accepts directly in X-Y format the start and end point for a line.

Command capabilities:

- 16 raster operations as defined by the ROP field of the command register.
- Gouraud shading.
- 32 bit scaled patterning.
- Color expansion.
- Screen door transparency.
- Bit plane masking.
- Open GL Alpha Blending

6.4 PLINE

Command Name: Poly Line

Command Mnemonic: PLINE

Command Description:

The PLINE command draws straight lines beginning at the destination of the last command. It uses modified Bresenham's Algorithm to ensure that a line drawn from point A to point B will exactly match a line drawn from point B to point A. This command accepts end point for a line in XY format.

Command capabilities:

- 16 raster operations as defined by the ROP field of the command register.
- Gouraud shading.
- 32 bit scaled patterning.
- Color expansion.
- Screen door transparency.
- Bit plane masking.
- Open GL Blending

6.5 Line with Initial Error

Command Name: Draw line with initial error

Command Mnemonic: ELINE

Command Description:

The ELINE is a variant of the LINE command which allows the setting of the initial and incremental values of the Bresenham error term. All the characteristics of the LINE command also apply to the ELINE command. The ELINE may be used when sub-pixel accuracy is required. By pre-loading the error terms, a line segment can be drawn and the pixels will match exactly as if the entire line had been drawn. In addition, the ELINE command allows triangle boundaries to be drawn to match precisely the pixels drawn by the triangle command.

Command capabilities:

- 16 raster operations as defined by the ROP field of the command register.
- 32 bit scaled patterning.
- Color expansion.
- Screen door transparency.
- Bit plane masking.
- OpenGL Alpha Blending

6.6 3D Lines with Setup

Command Name: Draw line with full setup.

Command Mnemonic: LINE_3D

Command Description: LINE_3D draws 3D Gouraud shaded, fogged, lit lines and points.

Command capabilities:

- 16 raster operations as defined by the ROP field of the command register.
- Specular Highlighting.
- Fog.
- Gouraud Shading.
- Alpha blending and compare.
- 16 or 32 bit Z buffering.
- bit scaled patterning.
- Color expansion.
- Screen door transparency in stipple mode.
- Bit plane masking.

6.7 3D Triangle with Full Setup and Vertex Sorting

Command Name: 3D Triangle

Command Mnemonic: TRIAN_3D

Command Description:

The TRIAN_3D command draws a Textured, Gouraud shaded, Specular lighted or flat shaded triangle. This command requires only vertex level parameters.

Command Capabilities:

- 16 raster operations as defined by the ROP field of the command register.
- Perspective corrected texture mapping.
- Bilinear filtering.
- Palettized texture maps.
- Linear MIP mapping.
- Specular Lighting.
- Fog.
- Gouraud Shading.
- Alpha blending and compare.
- 16, 24, fixed point Z buffering.
- 32 bit floating point Z buffering.
- 32x32 and 8x8 area patterning.
- Color expansion.
- Screen door transparency in stipple mode.
- Bit plane masking.
- 3D Color Keying
- Optional Float color values.
- Optional Backface culling w/ CW/CCW selection

6.8 Texture Invalidate

Command Name: Texture Invalidate

Command Mnemonic: INV_TEX

Command Description:

The texture invalidate command is set before switching to a new texture. It instructs the Silverhammer chip that the next triangle coming through has a different texture than previously used.

6.9 Load Texture Palette

Command Name: Load Texture Palette

Command Mnemonic: LD_TPAL

Command Description:

The load texture palette command loads a palette from the system or frame buffer memory into the Imagine internal texture cache palette. This command must be used to load a palette before using a 1, 2, or 4 bit palettized texture for the first time, or whenever a new texture is required.

- 8 bit palettized, 32 bit exact
- 8 bit palettized, 16 bit filtered
- 16 bit or 32 bit color palettes at 1,2,4 bit per texel
- automatic conversion of 32 bit to either 4444 or 0565 for 8 bit palette filtering
